

Track steering

Steering system

XControl track steering – full control directly from the joysticks

XControl track steering means that both tracks are controlled via the index finger rollers directly from the joysticks. One roller will run the tracks parallel forward / backward and the other roller will turn the excavator right / left.

The benefits of XControl track steering you as operator:

- Efficiency – Faster movement and better flow of work
- Safety – Fullfills the latest regulatory requirements for all types of excavators
- Flexibility – Soft control for better flexibility and precision

An unbeatable combination – XControl Joysticks with pistol grip and index finger rollers!

XControl track steering is an addition to XControl G2 adapted to each excavator model. Please contact us at Steelwrist when you have questions.

Teknisk specifikation

Matningsspänning 8-36 V

Operating temperature -40°C to +60°C
